# AIR CONDITIONING SERVICES

INSTALLATION · MAINTENANCE · REPAIR

At Jobfix we provide air conditioning solutions for a variety of environments including offices, retail and industrial. The focus of our business is installation, maintenance, repair and upgrade of air conditioning systems.

Our services range from simple call-outs and routine maintenance through to the design and installation of complex multi-unit air conditioning systems. We have the technical expertise, experience and resources to provide robust, safe and cost effective solutions.

# INSTALLATION MAINTENANCE REPAIR

- ◆ Jobfix engineers are trained, qualified and fully insured to perform installation, servicing, diagnostics and repair work
- ◆ Jobfix engineers have extensive experience in diverse air conditioning environments

Over the past 10 years, our customer base has grown from single site businesses to include large multi-site national corporations. We aim to provide our customers with a single point of contact for all their air conditioning requirements. From initial survey through to handover, project management, health & safety compliance, customer communication and project documentation are handled in-house.

## Environment

---

**We aim to limit the impact of our business activities on the environment** by ensuring that existing air conditioning systems are running efficiently, promoting the selection of equipment and controls with energy saving features and improved eco-production techniques, recycling materials and replacement of systems running on ozone depleting refrigerants.

## Health & Safety

---

Health & Safety is planned and managed in-house. **Our job-specific 'risk assessment' approach to each task or project means that the safety precautions taken match the work hazards.** Engineers are only assigned to work that is within their area of competence. Although each project is different, we dovetail our Health & Safety plans, work permits, policies and procedures with those of our customers to ensure legislative compliance and operational safety at all times.

## Customer Care

---

**We aim to win and retain customer business by providing a superior level of customer care in all areas of our air conditioning business.** We work with our customers, new and existing, to fully understand their requirements and provide guidance and expert advice. Upon completion of this phase, we create and submit detailed proposals for customer consideration. During the implementation phase, regardless of job size, a project manager is assigned to co-ordinate work activities and customer communication. Upon completion we provide operator training, appropriate to the completed project, Operating & Maintenance Manuals for client retention, and a maintenance proposal to ensure long term equipment efficiency and reliability. All work carries our company warranty for labour and materials, which can be extended under a range of service agreement options.

## Contact Us

If you have an air conditioning related question or problem, perhaps in a manufacturing, production, retail or office environment, we can help. Simply contact us by telephone or email and a member of our team will respond to discuss your individual requirements.
